Comment on dwes-2021-8

Lilas Nabhan

Community comment on "Predicting turbidity and Aluminum in drinking water treatment plants using Hybrid Network (GA- ANN) and GEP" by Ruba Alsaeed et al., Drink. Water Eng. Sci. Discuss., https://doi.org/10.5194/dwes-2021-8-CC4, 2021

The research is good and has innovative ideas
The issue is also important for water purification plants due to the importance of turbidity in assessing the stability of the plant's work and controlling aluminum values
But it needs some modification and revision, especially with regard to the language, and it is preferred to be reviewed by a native English speaker
And although that there are some new references, It is also preferable to add other reference studies in the foreground
