Comment on amt-2022-28

Omar Torres (Editor)

Editor comment on "A study of Mie scattering modelling for mixed phase Polar Stratospheric Clouds" by Francesco Cairo et al., Atmos. Meas. Tech. Discuss., https://doi.org/10.5194/amt-2022-28-EC1, 2022

I was waiting for the closing of the open discussion phase to proced with my decision. Given the two reviewers' unambiguous opinion on the the paper's lack of merit for publication, at this point I recommend the authors to expand their work according to the given recommendations and submit a new manuscript. Since the required additional work will take some time to be completed, I will not be recommending the submission of a revised version of the current manuscript.
