Comment on egusphere-2022-151

Mikh Kova

Community comment on "The modelled climatic response to the 18.6-year lunar nodal cycle and its role in decadal temperature trends" by Manoj Joshi et al., EGUsphere, https://doi.org/10.5194/egusphere-2022-151-CC4, 2022

Soory to criticise you but... The lunar infleunce on cliumate is described at https://journalijecc.com/index.php/IJECC/article/view/30803 What determines ccyles is not so much lunar nodes but New/Full Moon-perigees described at https://www.aimspress.com/article/doi/10.3934/geosci.2021034 Lunar nodes' influence is only secondary. Given the circumstacnes surrounding 2010 - 2016, no conclusion should be based on these years; these six years make a once in a mileinium event.
