Chief editor comment on "Assessment of the sea surface temperature diurnal cycle in CNRM-CM6-1 based on its 1D coupled configuration" by Aurore Voldoire et al., Geosci. Model Dev. Discuss., https://doi.org/10.5194/gmd-2021-413-CEC2, 2022

Dear authors,

Many thanks for making available the models and data in a Zenodo repository. About the ARPEGE model: We can accept that it is beyond your control to release it, and to have a private server available for the reviewers is enough. However, in the future, it would be better that you avoid using for research purposes models that can not be checked and that, therefore, hardly comply with the basics of scientific reproducibility during the publishing process.

Regards,

Juan A. Añel
