Comment on gmd-2021-45

Juan Antonio Añel

Chief editor comment on "RHEA v1.0: Enabling fully coupled simulations with hydro-geomechanical heterogeneity" by José M. Bastías Espejo et al., Geosci. Model Dev. Discuss., https://doi.org/10.5194/gmd-2021-45-CEC1, 2021

Dear authors,
We have checked your manuscript, and unfortunately, at the moment, it does not comply with our 'Code and Data Policy'. Currently, you archive the code of your model in Github. However, as we state in our policy and Github on its website, it is not a suitable repository for long-term archival.
Therefore, please, move your code to one of the suitable repositories that we list before the end of the Discussions period and make the necessary changes in the manuscript in potential reviewed versions.
