Author comment on "Transformation of geological sciences and geological engineering field methods course to remote delivery using manual, virtual, and blended tools in fall 2020" by Jennifer Jane Day, Geosci. Commun. Discuss., https://doi.org/10.5194/gc-2021-18-AC1, 2021

Thanks very much, Steve, for your thoughtful and constructive comments. I will certainly add further details to answer your question on “what happens now?”, and more information on how students engaged with the content. It is challenging to directly compare student performance with different questions on assignments, exams, etc.; however, it is possible to compare some performance as it relates to course learning outcomes between the in person 2019 and remote 2020 course deliveries.
