# Comment on soil-2021-104

Anonymous Referee #2

Referee comment on "Tolerance of soil bacterial community to tetracycline antibiotics induced by As, Cd, Zn, Cu, Ni, Cr, and Pb pollution" by Vanesa Santás-Miguel et al., SOIL Discuss., https://doi.org/10.5194/soil-2021-104-RC2, 2022

Dear Authors,

The manuscript is about a very interesting and important scientific topic, and I have only a comment about the soil characteristics, as we are studying heavy metals, so we must to have more detailed information about the soil texture, EC, carbonate and other macro elements.

And a recommendation for future work, your research could be more interesting and important using more types of soil, with different pH, texture and calcium carbonate, to link also the effect of soil properties on the heavy metals availability and so their effect on microorganisms.

Thanks and best regards
