Author comment on "A Normal Faults System in the Monte Nerone area and its significance in the recent seismo-tectonic setting of the Northern Umbria-Marche Apennines (Italy)" by Mauro De Donatis et al., Solid Earth Discuss., https://doi.org/10.5194/se-2021-87-AC3, 2021

Dear Rita De Nardis,

we will try to improve the text according to the suggestions of the reviewers; for that need time to work on.

I hope you can wait up to december because the work in the paper fights against teaching and other projects time.

Please let us know which deadline you can propose. Thanks

Best Regards

Mauro De Donatis
