

Interactive comment on “A Landsat-based model for retrieving total suspended solids concentration of estuaries and coasts” by Chongyang Wang et al.

B. Jackson (Editor)

bethanna.jackson@vuw.ac.nz

Received and published: 30 June 2017

We have really struggled finding enough reviewers who have not only the required technical and research competency to evaluate this manuscript but also the time to carry out a review. My apologies to the authors the process of review has therefore been slower than is normal, and thanks for providing your response to the existing published review.

A further review is still underway and I will evaluate the manuscript with recommendations as a matter of urgency once this is received.
