Received and published: 14 June 2017

I find the proposed work interesting, it seems to have a certain degree of originality, and it might be appropriate for a journal publication.

There are however some improvements and corrections that can be done. Some most significant observations are given next:

I would recommend avoiding the first person in the text in the favor of a more impersonal mode.

A separate section of Discussions will provide probably a more comprehensive picture

Discussion paper

of the results.

Probably the most important issue relates the fact that the validation of the proposed approach is not sufficiently well explained. This includes the reliability of each numerical model considered (the spectral wave model and the dispersive Boussinesq model).

Finally, I was not able to see any keyword, are the keywords not required in this journal?
