Figure S3: Relationship between the reported C<sub>2</sub>H<sub>6</sub> and concentration changes of CO<sub>2</sub> (left) and CH<sub>4</sub> (right) at 5 C<sub>2</sub>H<sub>6</sub> concentrations for instrument CFIDS 2072. The concentration change (from background levels) of the targeted gas is plotted on the x-axis, while the change in reported C<sub>2</sub>H<sub>6</sub> is plotted on the y-axis. Markers represent a 20 minute average, with error bars denoting the standard deviation. For each dilution series, C<sub>2</sub>H<sub>6</sub> concentration was kept constant at different concentrations, represented by the coloured markers. The CH<sub>4</sub> correction was examined up to 1.5 ppm C<sub>2</sub>H<sub>6</sub> to sustain a C<sub>2</sub>H<sub>6</sub>:CH<sub>4</sub> ratio <1, well above the upper range expected from natural gas sources. At all C<sub>2</sub>H<sub>6</sub> concentrations examined, for both ΔCO<sub>2</sub> and ΔCH<sub>4</sub>, the response function agreed within the uncertainties to that calculated at 0 ppm C<sub>2</sub>H<sub>6</sub>. The red line represents the linear fit taking into account both X and Y error; Pearson's R is -0.99 and -0.89 for concentration changes of both CO<sub>2</sub> and CH<sub>4</sub> respectively.

14

15 Figure S4: Isotopic signal (raw and corrected) from the CRDS for varying mixtures of CH<sub>4</sub>, CO<sub>2</sub> and C<sub>2</sub>H<sub>6</sub> at ~0%  
 16 H<sub>2</sub>O. The top and bottom x-axis represent the CO<sub>2</sub>, and CH<sub>4</sub> concentration respectively. The y-axis represents the  
 17 methane isotopic signal before and after correction, shown by empty and filled markers respectively. For each  
 18 dilution series, CO<sub>2</sub> and CH<sub>4</sub> were altered while C<sub>2</sub>H<sub>6</sub> concentration was kept constant at different concentrations  
 19 (ppm), represented by the coloured markers. The raw δ<sup>13</sup>CH<sub>4</sub> signal is subject to large biases, while the corrected  
 20 δ<sup>13</sup>CH<sub>4</sub> maintains the standard value, -55.7 +/- 0.2 (highlighted in yellow).
