Comment on acp-2021-280

Anonymous Referee #1

Referee comment on "Measurement report: High contributions of halocarbon and aromatic compounds to atmospheric volatile organic compounds in an industrial area" by Ahsan Mozaffar et al., Atmos. Chem. Phys. Discuss., <https://doi.org/10.5194/acp-2021-280-RC1>, 2021

The manuscript provided a field dataset on VOCs at a site of Nanjing city. The data on OVOCs, and halocarbons would be of interest for further interpreting of industrial case. However, the current version would be a very site-specific evaluation, I wonder the scientific value for the whole community, while data processing tools were regularly used, it was hard to link industrial emission sources to the ambient data.
