Comment on acp-2021-785

Daniel Potts

Community comment on "Ozone pollution during the COVID-19 lockdown in the spring of 2020 over Europe, analysed from satellite observations, in situ measurements, and models" by Juan Cuesta et al., Atmos. Chem. Phys. Discuss.,
<https://doi.org/10.5194/acp-2021-785-CC1>, 2021

Very interesting study. Our study, <https://doi.org/10.1088/1748-9326/abde5d>, where TROPOMI, in situ surface measurements and the chemical transport model GEOS-Chem were used to investigate lockdown emission changes of NO₂, Ozone and PM_{2.5} over the UK should be cited here as relevant work (introductory section lines 65-80).
