Author comment on "Statistical and machine learning methods for evaluating trends in air quality under changing meteorological conditions" by Minghao Qiu et al., Atmos. Chem. Phys. Discuss., <https://doi.org/10.5194/acp-2022-232-AC1>, 2022

Dear editor and reviewer,

We appreciate the opportunity to respond to these detailed comments to further strengthen our paper. There is an incomplete sentence in one of the comments from reviewer 2 (Dr. Benjamin Wells). The current comment is "...such as EPA's EQUATES series for 2002-2017 (<https://www.epa.gov/cmaq/equates>). The emissions from thes". We are wondering if the reviewer has more to suggest and comment on this point and we would appreciate any clarification and the opportunity to fully address this question.

Thank you!
