Author comment on "Gravity waves generated by the high graupel/hail loading through buoyancy oscillations in an overshooting hailstorm" by Xin Guo et al., Atmos. Chem. Phys. Discuss., https://doi.org/10.5194/acp-2022-559-AC4, 2022

Dear Editor, Dr. Heini Wernli

Thank you very much for your comments and suggestions.

By this chance, we like to express our sincere thanks to ACP editorial team for their excellent work. We will accept your suggestions and withdraw our manuscript from ACP. After adding our manuscript in spectral analysis of gravity waves, we like to submit the revised manuscript to other journals which might be more suitable for relevant studies in hailstorms. We also feel that our manuscript is weak in spectral analysis, which should be important to understand the properties of gravity waves found in our study.

Best regards,

Xueliang Guo, on behalf of all authors.
