Community comment on "Investigation of a Saharan dust plume in Western Europe by remote sensing and transport modelling" by Hengheng Zhang et al., Atmos. Meas. Tech. Discuss., https://doi.org/10.5194/amt-2021-193-CC1, 2021

Dear authors,

Congratulations on this comprehensive study. Such studies are useful in order to bring out the potential of using different observational datasets and modeling systems to better characterize episodic events over background areas.

I strongly urge you to enrich your reference list and link your study with previous studies in the area combining satellite, model, and observational data. Two such studies are:

Specifically, the study from Akritidis et al. (2020) highlights the ability of CAMS to capture the complex aerosol transport event (dust and smoke) over central-western Europe during Storm Ophelia while the second study is mostly ground-based.
