Comment on amt-2021-411

Anonymous Referee #1

Referee comment on "High-resolution typhoon precipitation integrations using satellite infrared observations and multisource data" by You Zhao et al., Atmos. Meas. Tech. Discuss., <https://doi.org/10.5194/amt-2021-411-RC1>, 2022

1. How much differences would different RF parameters be introduced for the model, and this should be briefly discussed.
2. Line 221: The session title is suggested to be rephrased.
3. As noticed in Figure 8, once the models are developed, it would also work for precipitation over ocean but maybe with less accuracy. This should be clarified in the paper.
4. There are some unnecessary texts in Figure 9(a), which should be removed.
