on "Tracking aerosols and SO₂ clouds from the Raikoke eruption: 3D view from satellite observations" by Nick Gorkavyi et al., Atmos. Meas. Tech. Discuss.,
<https://doi.org/10.5194/amt-2021-58->, 1970

Thanks for the comment. The CALIOP data confidently confirm that the height of the aerosol cloud from the Raikoke eruption in the latitudes of 20-30N reached 23-26 kilometers in August-September 2019.
