Referee comment on "Long-distance propagation of 162 MHz shipping information links associated with sporadic E" by Alex T. Chartier et al., Atmos. Meas. Tech. Discuss., <https://doi.org/10.5194/amt-2022-214-RC2>, 2022

Thank you for uploading the maps. I confirm that high foEs during daytime hours on 13 and 14 July and relatively low foEs on 15 July are consistent with long-distance AIS links presented in Figure 2. The links to these maps would be good addition to the paper.
