Francesco Cairo et al.

The authors thank the reviewer for the comments. In particular, they are ready to follow the reviewer's suggestion on the use of T-matrix codes to derive a range of $R_{\text{th}}$ and, in this proposed perspective, of the particulate aspect ratio, which best accord with the backscattering and depolarization observations. This will be done in an upcoming redaction of the work, or in a new submission, following the instructions of the editors.
