Comment on amt-2022-95

Stefan Kinne (Referee)

Referee comment on "The new MISR research aerosol retrieval algorithm: a multi-angle, multi-spectral, bounded-variable least squares retrieval of aerosol particle properties over both land and water" by James A. Limbacher et al., Atmos. Meas. Tech. Discuss., https://doi.org/10.5194/amt-2022-95-RC2, 2022

CORRECTION to REVIEW

in my review I also provided the MACv3 aerosol top down aerosol type approach. Unfortunately there is an errot in table 1 as the (midvis) SSA for large mineral dust is (not constant) but a function of size (the table lists the same values 0.962 value)

Table 1 correction: for re= 1,5, 2.5, 4.0, 6.5 and 10 the mid-visible dust SSA values are 0.962, 0.931, 0.918, .882 and .840 for the same imaginary part (here 0.0011) ... that is very important to understand my comments of the review
