Osuke Saka

Author comment on "Ionospheric control of space weather" by Osuke Saka, Ann. Geophys. Discuss., <https://doi.org/10.5194/angeo-2020-92-AC2>, 2021

Thank you for your review and comments.

As suggested, a revision should include a few sentences explaining that this report is an extension of the work of Saka [2019]. It would also be helpful to note that MI coupling is driven in this scenario by field-aligned current of ionospheric and not magnetospheric origin. This point was not made explicit in Saka [2019].

Remaining referee comments will be addressed in the revised version.
