Ioannis A. Daglis et al.

Author comment on "Predictability of variable solar–terrestrial coupling" by Ioannis A. Daglis et al., Ann. Geophys. Discuss., <https://doi.org/10.5194/angeo-2020-94-AC1>, 2021

We are grateful for the constructive comments of the reviewer. We agree with all suggestions and we have implemented most of them in the text and believe that it has improved considerably. With regard to the last suggestion on "adding a paragraph describing the plan of action going forward", we regret that this was not part of the mandate of the NSP committee and therefore it had not been addressed. It remains to be published by the teams who now have the responsibility of the PRESTO implementation.

With best regards

Ioannis A. Daglis, on behalf of all authors
