Author comment on "Classification of spectral fine structures of Saturn kilometric radiation" by Georg Fischer et al., Ann. Geophys. Discuss.,
<https://doi.org/10.5194/angeo-2022-7-AC1>, 2022

Dear reviewer,

thank you very much for your review, and we see that you are mainly okay with it. You are right that our work is mainly an observational work characterizing the spectral structures. We only would like to add that (surprisingly) it is the first time that such a kind of classification has been made.

Best regards, Georg Fischer
