Referee comment on "Methane gas emissions from savanna fires: What analysis of local burning regimes in a working West African landscape tell us" by Paul Laris et al.,
Biogeosciences Discuss., <https://doi.org/10.5194/bg-2020-476-RC5>, 2021

I would like to congratulate authors for the improvement of the manuscript. You could find below the comments they did not understand or took into account.

Line 28: I suggested authors to propose this value for the study area as it is not clear or mentioned anywhere in the manuscript how they calculate this value.

Lines 119-133: I suggest author to move this details of study site or area description (precipitation ...) in the description of the study area section in method

Line 379: I suggested author to write late in **the dry**
