Community comment on "Long-term incubations provide insight into the mechanisms of anaerobic oxidation of methane in methanogenic lake sediments" by Hanni Vigderovich et al., Biogeosciences Discuss., <https://doi.org/10.5194/bg-2021-223-CC4>, 2021

We would like to thank the reviewer for the positive and constructive review. We realize from all reviews that indeed the paper should be clarified and flow better. We are currently clarifying and simplifying the paper all along, All co-authors are involved in editing the manuscript and we will also have final English editing. We believe that the paper will flow now and will be clearer for the readers. We also accept all other comments, which significantly improve the revised version. We will upload the revised version with the detailed response to the specific comments soon.
