Comment on bg-2021-65

Andreas Heinemeyer

Community comment on "Effects of peatland management on aquatic carbon concentrations and fluxes" by Amy E. Pickard et al., Biogeosciences Discuss., <https://doi.org/10.5194/bg-2021-65-CC1>, 2021

Really nice study! Congratulate the authors on such a neat design and presentation of the findings.

I would like to suggest the authors include a clarification in the title as to the type of management. Only too often are papers quoted in relation to management (generic) whilst the actual study focused on one issue (drainage). So here it is addressing past afforestation (and drainage!) on peatlands.
