Yi-Ying Chen and Sebastiaan Luyssaert

Author comment on "Tropical cyclones facilitate recovery of forest leaf area from dry spells in East Asia" by Yi-Ying Chen and Sebastiaan Luyssaert, Biogeosciences Discuss., https://doi.org/10.5194/bg-2022-115-AC2, 2022

We would like to thank both referees for their insightful comments on the original manuscript. Referee 1 and 2 commented on criteria that were used to select/exclude a cyclone from further analyses resulting in a revised set of criteria. These revised criteria will require re-running the entire analysis and remaking all figures and tables. The figures presented in this reply should, therefore, be considered as examples showing how the revised figures could address referee comments but are not final. Please find the supplement/pdf file for our replies to the comments.

Please also note the supplement to this comment:
