Referee #1

We are grateful to Referee #1 for the high opinion of our paper.

RC#1: 1. It is Udryn not Udrin.

2. I propose to give a range of TLW in Table 2 for Udryn including earlier modeling result TLW=-10C of Safanda et al. 2004 (cited in the references) versus existing much later estimate by Rath and Mottaghy (2007), (-8C). I would give a range -8 to -10C as shown in both publications which used different methodology.

Author's changes: We'll take into account all the comments in the revised version.
