Comment on cp-2021-113

Eric Wolff (Editor)

Editor comment on "Millennial variations in atmospheric CO₂ during the early Holocene (11.7–7.4 ka)" by Jinhwa Shin et al., Clim. Past Discuss.,
<https://doi.org/10.5194/cp-2021-113-EC1>, 2021

Two reviewers have commented on your paper. While both of them would like to see the data published, they make quite substantial comments requiring substantial responses and, if you choose to submit a revised manuscript, major revisions of the existing version. Please respond to all their comments. Please pay particular attention to the concerns of both reviewers about the statistics that led to very scattered data becoming a very narrow error envelope, and the huge scepticism (which I share) about your assertion of a solar link. When you have submitted your author responses I will be able to recommend whether you should produce a revised version. If that is the case, I would expect to send it for further review.
