Comment on cp-2021-132

Jakob Heyman

Community comment on "Was there a glacial outburst flood in the Torngat Mountains during Marine Isotope Stage 3?" by Tamara Pico et al., Clim. Past Discuss., <https://doi.org/10.5194/cp-2021-132-CC4>, 2021

Data comments:

* The longitude of the samples given in Table S1 (-65.79) appear to be located too far west. Based on Figure 3, the longitude should be something around -64.56. If you have more detailed coordinates for the samples it would be good to include them.

* The ^{10}Be concentration uncertainties in Table S1 appear to be too small based on the internal exposure age uncertainties in Table S1. Should they perhaps be multiplied by 10?
