Referee comment on "The Warm Winter Paradox in the Pliocene High Latitudes" by Julia C. Tindall et al., Clim. Past Discuss., https://doi.org/10.5194/cp-2021-186-RC1, 2022

In this study, Tindall et al. pinpointed a substantial model-data mismatch, "the warm winter paradox," for the Pliocene study. Meanwhile, they further discussed the potential reasons behind this mismatch. This study is an outstanding contribution to our understanding of the warm Pliocene climate. The paper is very well written and can be accepted in its current form.
