Author comment on "Extreme historical droughts and floods in the Hanjiang River Basin, China, since 1426" by Xiaodan Zhang et al., Clim. Past Discuss.,
<https://doi.org/10.5194/cp-2021-43-AC5>, 2021

Dear Prof. Hirano,

Thank you for your valuable comment. In the revised version, we will add topographic information to Figure 1 and label the corresponding names included in each representative site. All place names covered in this manuscript will be labeled.

Because of the limited space in this article, the relationship with PDO is expected to be discussed in the future. After considering other experts' comments on section 3.2(ENSO and volcanic eruptions), we decided to move this section to the discussion section and replace section 3.2 with an analysis of the spatial distribution of extreme droughts and floods in the Han River basin. We will also add some words in the discussion section to analyze the relationship between extreme droughts/floods in the Hanjiang River basin and decadal to multi-decadal variability of East Asian summer monsoon.

Thank you again!

Kind regards,
Xiaodan Zhang
