Editor comment on cp-2021-7

Eric Wolff (Editor)

Editor comment on "Enhanced moisture delivery into Victoria Land, East Antarctica, during the early Last Interglacial: implications for West Antarctic Ice Sheet stability" by Yuzhen Yan et al., Clim. Past Discuss., <https://doi.org/10.5194/cp-2021-7-EC1>, 2021

You will see that the reviewers are generally enthusiastic about the idea behind your manuscript. However they all have some concerns about the values and uncertainties on delta-age, with particularly pertinent comments from reviewer 2 in that regard. Please respond to all comments, paying particular attention to how you will deal with that issue. Provided you can give a good response to that issue i would expect to recommend that you prepare a revised version of the paper for CP.
