Referee comment on "Technical note: Graph-theory-based heuristics to aid in the implementation of optimized drinking water network sectorization" by Marius Møller Rokstad and Karel van Laarhoven, Drink. Water Eng. Sci. Discuss., https://doi.org/10.5194/dwes-2021-11-RC2, 2022

The paper is well written, the figures explain very well the text, and the conclusions are solid. Well done.

Some minor remarks.

Line 31: add "from" between "process" and "start"

Line 114: Is "Dijkstra’s algorithm" so generally known that no reference is required?

Line 142: start numbering at 1.
