Comment on dwes-2021-8

Prakash Jagadeesan

Community comment on "Predicting turbidity and Aluminum in drinking water treatment plants using Hybrid Network (GA- ANN) and GEP" by Ruba Alsaed et al., Drink. Water Eng. Sci. Discuss., <https://doi.org/10.5194/dwes-2021-8-CC7>, 2021

The authors have developed a soft sensor to predict the turbidity level in the drinking water. The three years data from the water purification plant has been used for validation. The effort taken by the research scholar and his supervisors deserves special appreciation

Wishing the scholar a very good luck
