Referee comment on "Predicting turbidity and Aluminum in drinking water treatment plants using Hybrid Network (GA- ANN) and GEP" by Ruba Alsaeed et al., Drink. Water Eng. Sci. Discuss., <https://doi.org/10.5194/dwes-2021-8-RC1>, 2021

---

This manuscript proposes a new method for predicting the turbidity level in the drinking water treatment plant. A three-year dataset from the Al Qusayr water treatment plant was used for developing and validating the model. Although the article is in the scope of the journal and has some merits and innovations, the writing of the paper needs significant improvement. Also, there should be more information about the dataset used in the article and its limitation.
