## **Comment on egusphere-2022-1328**

Juan Antonio Añel

---

Chief editor comment on "Simulation of a fully coupled 3D GIA – ice-sheet model for the Antarctic Ice Sheet over a glacial cycle" by Caroline Jacoba van Calcar et al., EGU sphere, <https://doi.org/10.5194/egusphere-2022-1328-CEC1>, 2023

---

Dear authors,

Unfortunately, after checking your manuscript, it has come to our attention that it does not comply with our "Code and Data Policy". [https://www.geoscientific-model-development.net/policies/code\\_and\\_data\\_policy.html](https://www.geoscientific-model-development.net/policies/code_and_data_policy.html)

In your statement on code and data availability, you say that both kinds of assets are available "momentarily". Also, you state that some MATLAB scripts will be accessible after publication. We can not accept this kind of restriction. All the code and data relevant to your work has to be published before the manuscript appears in Discussions, and it must be permanently stored without the possibility of modification or removal by the authors.

This way, please, make the changes necessary to the repositories so that the storage of code and data and their DOIS are permanent, and you can not remove them. Also, publish your MATLAB scripts.

Please, reply as soon as possible to this comment with the links for the assets (and new DOIS, if necessary) so that they are available for the peer-review process, as they should be.

Juan A. Añel
