Comment on egusphere-2022-199

Anonymous Referee #2

Referee comment on "Numerical Modeling Investigation of Flushing Characteristics and Water Age in a Highly Stratified estuary: Mobile Bay, Alabama, U.S.A." by Gaurav Savant and Tate O. McAlpin, EGUsphere, <https://doi.org/10.5194/egusphere-2022-199-RC2>, 2022

I can only concur with the comments of Referee #1 in that the similarities of the present submission with the previous article of Du et al. (JGR, 2018) must lead one to wonder what is really novel here -- in terms of methodology, flow diagnoses and conclusions. The Authors should be given a chance to rebut all this in detail, thereby explaining why their study should be published -- and why that of Du et al. (2018) is no longer sufficient.
