Comment on egusphere-2022-294
Juan Antonio Añel

Chief editor comment on "Wind work at the air-sea interface: A Modeling Study in Anticipation of Future Space Missions" by Hector S. Torres et al., EGUsphere, https://doi.org/10.5194/egusphere-2022-294-CEC1, 2022

Dear authors,
After checking your manuscript, it has come to our attention that it does not comply with our "Code and Data Policy", https://www.geoscientific-model-development.net/policies/code_and_data_policy.html

We can not accept a manuscript for publication that does not provide the code and the models used for the work described. Also, we request that all the configuration and input files necessary to reproduce your work are stored in one of the suitable repositories listed in our policy, and you must include the DOI. In this way, the servers that you indicate in the Data Availability statement do not comply with policies to assure long-term data archivally. Moreover, it presents a lack of detail on how to access the specific files, simply pointing to generic web pages or portals. Also, the statement "All rights reserved" is totally unacceptable.

Therefore, we request you that fix this issue immediately. I would not expect that it would take longer than five working days to do it. Otherwise, we will have to reject your paper for publication in Geosci. Model Dev. for not complying with the policy of the journal.

Best regards,

Juan A. Añel
Geosci. Model Dev. Executive Editor
