Comment on egusphere-2022-387

Juan Antonio Añel

Chief editor comment on "A modeling framework to understand historical and projected ocean climate change in large coupled ensembles" by Yona Silvy et al., EGUsphere, https://doi.org/10.5194/egusphere-2022-387-CEC1, 2022

Dear authors,

After checking your manuscript, it has come to our attention that it does not comply with our "Code and Data Policy".
https://www.geoscientific-model-development.net/policies/code_and_data_policy.html

You have archived your code on GitHub. However, GitHub is not a suitable repository. GitHub itself instructs authors to use other alternatives for long-term archival and publishing, such as Zenodo. Therefore, please, publish your code in one of the appropriate repositories, and include the relevant primary input/output data. In the same vein, we do not accept embargoes such as registration, previous contact with the authors or upon request statements. All the necessary input and configuration files must be made available with the paper, again through one of the repositories that we accept.

In this way, you must include in a potential reviewed version of your manuscript the modified 'Code and Data Availability' section, the DOI of the code (and another DOI for the dataset if necessary). Also, reply as soon as possible to this comment with the link for it so that it is available for the peer-review process, as it should be.

Also, in the GitHub repository, there is no license listed for your software. If you do not include a license, despite what you state in the README file, the code is not "open-source"; it continues to be your property. Therefore, when uploading the code to the new repository, you could want to choose a free software/open-source (FLOSS) license. We recommend the GPLv3. You only need to include the file 'https://www.gnu.org/licenses/gpl-3.0.txt' as LICENSE.txt with your code. Also, you can choose other options that Zenodo provides: GPLv2, Apache License, MIT License, etc.

Be aware that failing to comply with this request will result in the rejection of your manuscript for publication.

Best regards,
Juan A. Añel
Geosci. Model Dev. Exec. Editor
