Referee comment on "Assimilation of transformed water surface elevation to improve river discharge estimation in a continental-scale river" by Menaka Revel et al., EGU sphere, <https://doi.org/10.5194/egusphere-2022-412-RC3>, 2022

I have reviewed in detail the authors' responses to my comments in the first round of revisions. It appears that the authors were able to resolve and address all the corrections. I will be waiting for the final version of the main document (file I have not yet received) before I can make a decision. Thanks
