Comment on egusphere-2022-465
Juan Antonio Añel

Chief editor comment on "UVBoost (v0.5): an erythemal and vitamin D-weighted ultraviolet radiation estimator based on a machine learning gradient boosting algorithm" by Marcelo de Paula Corrêa, EGUsphere, https://doi.org/10.5194/egusphere-2022-465-CEC1, 2022

Dear author,

Unfortunately, after checking your manuscript, it has come to our attention that it does not comply with our "Code and Data Policy".
https://www.geoscientific-model-development.net/policies/code_and_data_policy.html

Your manuscript currently contains several violations of our policy. First, you have archived the SLM material on GitHub. However, GitHub is not a suitable repository. GitHub itself instructs authors to use other long-term archival and publishing alternatives, such as Zenodo. Therefore, you must move all the information in the GitHub repository to one of the suitable ones.

Secondly, you do not provide the input and output data for your work. In your reply to the Topical Editor, you pointed out the CMIP6 repository; however, this information is too generic. A paper using SML to have the exact input and output files is critical to validate the scientific replicability and reproducibility. Therefore, it is mandatory that you upload to the repository such files. Beyond this, your manuscript is mostly about developing the database and applying the boost method, making it more critical to publish the mentioned data.

Also, you cite the UCAR repository for the TUV data, and again, the UCAR repositories are not suitable for long-term permanent archival, and we can not trust them for scientific publication. In this way, you must ask the maintainers of the TUV data to upload the file to one of the suitable repositories, or you must do it yourself.

Therefore, please, publish your code and data in one of the appropriate repositories, and reply to this comment with the relevant information (link and DOI) as soon as possible, as it should be available for the Discussions stage which closes in one week.

Also, on this way, you must include the modified ‘Code and Data Availability’ section in a potential reviewed version of your manuscript, the DOI of the code (and another DOI for the dataset if necessary).
Be aware that failing to comply with this request will result in the rejection of your manuscript for publication.

Juan A. Añel
