Author comment on "Impact of the sampling procedure on the specific surface area of snow measurements with the IceCube" by Julia Martin and Martin Schneebeli, EGU sphere, <https://doi.org/10.5194/egusphere-2022-501-AC3>, 2022

Dear Florent,

we are thankful for the time and effort you took to review our paper.

We appreciate the share of your broad experience with the IceCube and will try to incorporate your valuable points of discussion (i.e., brushing the sample surface, and sample preparation).

Furthermore, as mentioned in an earlier reply we will include a data set with snow from Greenland to present a higher variation of snow types to make our study more robust.

Also, we will extend the discussion about the NIR wavelength.
