Author comment on "Analyzing The Factor and Work Model of Environmental Journalist in Renewable Energy" by Marlinda Irwanti Poernomo et al., EGU sphere,
<https://doi.org/10.5194/egusphere-2022-505-AC5>, 2022

Here I add several responses related your comments:

1. It is fuel
2. The strong environmental change we are experiencing:

Furthermore, one of the critical environmental issues in two decades is the climate change caused by the greenhouse gas effect and fossil fuel. Then, several people mention that the term climate change has change into a climate crisis contextually (Carrington, 2019). In addition, there are several strong environmental changes such as the increasing level of CO₂, frequency of extreme weather, and the rising of global temperatures. Therefore, the world has found the alternative way to change the conventional fossil energy. It becomes the most significant threat of ozone depletion, the mantle layer of the earth's protective atmosphere, with renewable energy-based energy sources. It is inseparable from the fact that renewable energy sources are cleaner in releasing carbon emissions.
