François Colleoni et al.

Author comment on "Adjoint-based spatially distributed calibration of a grid GR-based parsimonious hydrological model over 312 French catchments with SMASH platform" by François Colleoni et al., EGU sphere, <https://doi.org/10.5194/egusphere-2022-506-AC1>, 2022

Dear colleague,

We will add a data policy section.

The code is available upon request and will be open online in a couple of month, we can send it to you right now for the review. Nevertheless we believe that this research article, on the questions mentioned in introduction is well understandable with the proposed material and fits with the scope of HESS. It focuses on the evaluation of a spatially distributed variational calibration algorithm applied to a parsimonious distributed model over a large sample. This will be clarified in the manuscript.

Best regards,

P.-A. Garambois on behalf of the authors
