Comment on egusphere-2022-528

Anonymous Referee #2

Referee comment on "Brief Communication: Inclusiveness in designing an early warning system for flood resilience" by Tahmina Yasmin et al., EGU sphere,
<https://doi.org/10.5194/egusphere-2022-528-RC2>, 2022

The manuscript on 'Inclusiveness in designing early warning system for flood resilience' by Yasmin et al is interesting. However, still the message of the short communication is not clear to me. I would suggest major revision taking into account the following comments:

- 1) The authors should provide a clear description how the SMART approach resolve existing limitations of flood warning system.

- 2) The authors should provide evidences and examples of the application of SMART approach.

Without incorporating both two aspects, I do not see value added of this manuscript.
