Comment on egusphere-2022-566

Nathaniel Baurley (Referee)

Referee comment on "Recent changes in drainage route and outburst magnitude of Russell Glacier ice-dammed lake, West Greenland" by Mads Dømggaard et al., EGU sphere,
<https://doi.org/10.5194/egusphere-2022-566-RC1>, 2022

This is good article: the research undertaken and findings presented are of interest to the wider community and address a gap in our understanding.

There are some sections which need work, specifically the Methods relating to your UAV surveys, but mostly the article is of a good quality overall, as is the writing and overall structure of the manuscript.

More detailed comments can be found in the attached PDF document.

If the authors have any questions or require clarification on anything I've said, then please feel free to get in contact.

Dr. Nathaniel Baurley
