Author comment on "Mapping soil micronutrient concentration at national-scale: an illustration of a decision process framework" by Christopher Chagumaira et al., EGU sphere, <https://doi.org/10.5194/egusphere-2022-583-AC1>, 2022

(i) We are pleased that the reviewer thinks that the paper is well written, methodologically valid, and addresses the questions that it poses. (ii) We have published in various EGU journals before, including SOIL, and we believe that we have always considered/addressed reviewer comments thoroughly. In our experience, including as reviewers, editors of SOIL have managed the peer-review process appropriately.
