Referee comment on "HIDRA2: deep-learning ensemble sea level and storm tide forecasting in the presence of seiches – the case of Northern Adriatic" by Marko Rus et al., EGUsphere, https://doi.org/10.5194/egusphere-2022-618-RC1, 2022

The manuscript is great in its approach and compares with previous models. The application of the work is also in a major area of concern. Adding a bit more technical details to the manuscript will be good for the readership of the article.
